

Backflow Preventer type BA 6600

Controllable Backflow Preventer with isolating valves

4

Field of application

The SYR Backflow Preventer type BA is a compact safety valve in compliance with the European standard EN 1717 (Protection against pollution of potable water installations and general requirements for devices to prevent pollution by backflow), group B (three pressure zones system). It is in conformity with type BA described in EN 1717 and therefore it can be used as a protective device up

to fluid category 4 (included). Its task is to prevent back-siphonage or backflow of non-drinking water into the public potable water system. The Backflow Preventer type BA covers numerous application possibilities (for instance printing, chemical and food industry, laboratories and medical technology).

Design

The Backflow Preventer type BA includes all components determined in the European standard EN 1717 and is designed as 3-pressure zones-system with controllable upstream / intermediate and downstream pressure zones. In addition, it includes two isolating valves and an integral strainer. The ball valves on top of each of the three pressure zones are used in combination with a test kit to verify functionality by pressure measurement. The

Backflow Preventer is composed of 2 consecutive check valves with an intermediate pressure zone that can be vented to the atmosphere. When no water is drawn off, both check valves are open and the discharge valve is closed. In case of back-siphonage, the inlet pressure drops. The discharge valve opens at the latest when the differential pressure between upstream and intermediate pressure zone has dropped to 0.14 bar.

6600 Backflow preventer BA

Materials

The body is made of low-lead dezincification resistant gunmetal alloy. The internal parts are made of high-quality corrosion resistant synthetic materials or stainless steel. All materials are tested and approved by DVGW. All synthetic parts getting

in contact with drinking water intended for human consumption are approved by the German Public Health Office (KTW). The discharge outlet on the valve is made of high-quality synthetic material.

Installation

Permanent access to the valve has to be provided and it shall not be mounted in rooms liable to flooding, frost or high temperatures. The installation should only be carried out in a well-ventilated environment. The connected discharge device must be able to collect the discharge volume. The Backflow Preventer type BA has to be installed in horizontal position with the discharge valve

(tundish connection) facing downwards. The test ports should be easily accessible. For a perfect function, it is recommended to locate a drinking water filter upstream. Thoroughly rinse the pipe prior to the installation. Install the Backflow Preventer type BA in horizontal position in the pipe under consideration of the flow direction without applying stresses.

Technical data

Operating pressure:	max. 10 bar
Operating temperature:	max. 65°C
Mounting position:	horizontal, tundish facing downwards
Fluid:	Drinking water
Flow rate capacity:	DN 15: 1.75 m³/h at 1.5 bar Δp DN 20: 4.10 m³/h at 1.5 bar Δp DN 25: 5.70 m³/h at 1.5 bar Δp
Serial number:	6600...

Maintenance

According to EN 1717, the Backflow Preventer type BA has to be serviced on a regular basis. Therefore maintenance agreements between user and installer are useful. The proper function has to be verified after the first service year and then periodically in accordance with the operating

conditions, but every two years at the latest. The ball valves on top of each pressure zone are used in combination with a test kit to verify functionality. This Backflow Preventer type BA is designed with a cartridge system which makes the maintenance easy and unproblematic.

Nominal size		DN 15	DN 20	DN 25
	A	R 1/2"	R 3/4"	R 1"
Dimension in mm	L (mm)	223	293	301
	l (mm)	167	231	231
	H (mm)	132.2	187	187
	h (mm)	56.2	58.4	81.4
